

MTF Tissue Safety and Integrity

Since its inception in 1987, with over 3.5 million grafts distributed, MTF maintains an unrivaled safety record. Under the guidance of its Board of Directors, Medical Board of Trustees, and Donation Board of Trustees, MTF takes every precaution to ensure tissue safety – from recovery through distribution.

- MTF meets and exceeds the standards and regulations of the American Association of Tissue Banks (AATB) and the Food and Drug Administration (FDA)
- MTF employs the latest technologies (such as Nucleic Acid testing) to conduct serological tests on all donors.
- MTF's strict donor criteria has never been surpassed by any tissue bank
- MTF's rejects more donors every year than any other tissue bank as the tissues of these donors unfortunately fail to meet the strict acceptance criteria.
- MTF takes every precaution to ensure patient safety—for this reason no other tissue bank has a better safety record.
